

**H0423 MetroPlus Health Plan.
Chronic or Disabling Condition (HIV/AIDS) Special Needs Plan**

Model of Care Score: 93.33%
3-Year Approval

January 1, 2015 – December 31, 2017

Target Population

MetroPlus Health Plan provides care to residents of Brooklyn, Bronx, Manhattan and Queens New York. The plan offers a chronic condition special needs plan (C-SNP) to qualified members diagnosed with Human Immunodeficiency Virus (HIV) disease. The C-SNP provides client-centered disease management and complex case management services that link the member to coordinated and medically appropriate levels of care and support.

Of the five boroughs of New York, The Bronx contains 22.4 percent of all MetroPlus Medicare members and 28.7 percent of all chronic condition members, with 83 percent living in neighborhoods of poverty exceeding 30 percent. Queens has 20.1 percent of all MetroPlus Medicare enrollees and 15.2 percent of chronic condition members, with 32 percent living in neighborhoods of poverty exceeding 30 percent. Manhattan holds 19.1 percent of all MetroPlus Medicare enrollees and 21.6 percent of chronic condition members, with 40 percent living in neighborhoods of poverty exceeding 30 percent.

Provider Network

MetroPlus maintains a network of facilities and providers throughout New York. The network includes over 16,000 primary care providers, specialists and other provider offices. In addition to hospital-based providers, MetroPlus members obtain primary and specialty care services at community-based doctor's offices and neighborhood family care sites. Members also access primary care and specialty services at 11 different hospitals

MetroPlus contracts with a practice for house calls which consists of licensed physicians and nurse practitioners. This practice includes a network of specialty care resources including podiatry, optometry, nutrition, pain management and dermatology. Services provided include, in-home diagnosis, treatment of acute/chronic conditions, medication reconciliation, blood tests, X-rays, EKG's, sonograms, telemetry and physical exams. In addition to a contracted house calls practice, MetroPlus employs a nurse group which makes home visits to members.

Care Management and Coordination

MetroPlus uses a care coordination process which begins with a health risk assessment (HRA). The plan contacts each member by letter and telephone to complete an HRA and complex needs assessment within 90 days of enrollment, and annually thereafter. The assessments include an evaluation on member's physical, behavioral and social health status. After completion of the HRA, MetroPlus uses a tool to stratify SNP members by health status and risk. The tool

accurately predicts the risk of inpatient utilization based on information provided to the questionnaires. Members are stratified into three risks for hospitalization: high risk, moderate risk and low risk based on a risk prediction model.

Following completion of the HRA, the plan develops individual care plans (ICP) based on the results. The ICP uses claims, utilization and pharmacy data if available. In conjunction with the member and/or the member's caregiver, a case manager develops the ICP to meet prioritized goals. In addition to prioritized goals, the care plan also includes barriers to achieving goals such as financial concerns, cultural constraints and lack of family support. The case manager works with the member to develop strategies for overcoming these barriers.

Once MetroPlus develops the ICP, the plan draws on different specialties to assemble an interdisciplinary care team (ICT). The composition of the ICT reflects the medical needs of each member. Plan staff hold responsibility for assuring clear and timely communications amongst the ICT, providers of care and community based programs. Core ICT members include, a team leader, case manager, utilization manager, health educator, case manager associate, Medicare member advocate, social worker, behavioral health case manager and the members primary care provider. MetroPlus considers the member a part of the ICT and solicits their input regarding care plan goals.

This MOC summary is intended to provide a broad overview of the SNP's MOC. Although the full extent of any MOC cannot be conveyed in a short summary, this summary provides the reader with a general overview of how the SNP addresses beneficiary needs.
