

**H3113 Oxford Health Plans (NJ), Inc.
Dual Eligible (Dual Eligible Subset - Medicare Zero Cost-sharing) Special Needs Plan**

Model of Care Score: 88.33%

2-Year Approval

January 1, 2015 – December 31, 2016

Target Population

Oxford Health Plans (NJ), Inc. (UnitedHealthcare) Dual Eligible Special Needs Plan (D-SNP) serves dually-eligible Medicare and Medicaid members who are eligible to receive long-term care services and reside within one of its service areas in New Jersey.

Based on data from Oxford Health's total D-SNP population, the majority of members are between the ages of 65 and 84 and are predominantly female. While a large portion of the population is Black (43 percent), nearly a third is White (31 percent) and 10 percent is Hispanic. Most members speak English (74 percent) and Spanish (4 percent). Ninety percent of members have an annual income of less than \$20,000.

The four most prevalent diseases within the population are diabetes (39 percent), cardiovascular disease (38.6 percent), chronic obstructive pulmonary disease (17 percent) and heart failure (13 percent). The three most prevalent behavioral/mental health disorders within this population are major depressive, bipolar, and paranoid disorders (6 percent), schizophrenia (5 percent) and drug/alcohol dependence (2 percent).

Provider Network

Oxford Health's network offers members a full spectrum of care to meet their unique needs. It includes primary care physicians (PCP); physicians specializing in gerontology, cardiology, endocrinology, nephrology, behavioral health, orthopedics, urology, rheumatology and ophthalmology; long-term care specialists and hospital "Centers of Excellence." The plan's ancillary network includes pharmacists, physical/occupational therapists, speech pathologists, radiology and laboratory specialists and dialysis centers.

Oxford Health assigns each member to a health system navigator (HSN) team that aligns with his or her individual needs and assigned risk group. Additionally, the PCP plays a key role in the oversight of the member's care, treatment plan and goals.

Care Coordination and Management

Upon enrollment, the plan contacts the member by telephone or direct mail to administer a health risk assessment (HRA) that identifies his or her specialized needs and stratifies the member

accordingly. The HRA assesses the member's medical history, behavioral health conditions, psychosocial, functional and cognitive needs, medications and general health. The plan uses the results to identify members for targeted clinical programs. Members identified as high-risk must complete a specialized, condition-specific comprehensive health assessment upon completion of the HRA. Reassessments occur at least annually for most members and semi-annually for high-risk members. If one of the following events occur acute admission, exacerbation of chronic condition, changes in health status/condition and/or changes in social supports or living situation, the plan performs a reassessment immediately.

Findings from the HRA and/or comprehensive health assessment help the HSN or health navigator team (HNT), along with the PCP, member and interdisciplinary care team (ICT) members generate an individualized care plan (ICP). Essential elements of the ICP include the member's needs, short and long-term goals, timelines for goal completion, outcome measures, healthcare preferences and specifically tailored services and interventions. The individuals mentioned above develop the ICP and send it to the member and other pertinent providers via mail, fax or the provider portal housed in the electronic record system. The ICT reviews and revises the ICP as it interacts with the member and updates it annually at a minimum. It also updates the ICP as necessary with changes in the member's health status/condition or living situation.

Each member's ICT includes the PCP, the assigned HSN, the member and/or caregiver. Based on the member's expressed needs, preferences, clinical condition and/or living situation, the ICT expands to include appropriate professionals and community supports. The HSN serves as the facilitator and coordinator for the ICT and is responsible for providing oversight for the care management process, participating in the creation and maintenance of the ICP, ensuring that care is consistent with best practices, collaborating with other participants in efforts to improve care, outcomes and satisfaction and supporting and facilitating connections with local community care and service providers.

This MOC summary is intended to provide a broad overview of the SNP's MOC. Although the full extent of any MOC cannot be conveyed in a short summary, this summary provides the reader with a general overview of how the SNP addresses beneficiary needs.
