

**H5926 Molina Healthcare of Michigan, Inc.
Dual Eligible (All Dual) Special Needs Plan**

Model of Care Score: 86.67%

3-Year Approval

January 1, 2015 – December 31, 2017

Target Population

Molina Healthcare of Michigan, Inc. (Molina) Dual Special Needs Plan (D-SNP) enrolls members who are entitled to both Medicare and Medicaid benefits and reside in one of the plan's service areas in Michigan.

Molina's total membership includes 37,386 individuals and 10,105 of them reside in Michigan. Among Molina's D-SNP population, there is a smaller percentage of White members and higher percentages for each of the other races (Black or African-American, Asian, American Indian or Alaskan Native, and Native Hawaiian or other Pacific Islander). English is the preferred spoken language among members.

The most prevalent medical conditions among D-SNP members are: diabetes (35.3 percent), ischemic heart disease (22.3 percent), chronic obstructive pulmonary disease (19.2 percent) and congestive heart failure (12.1 percent). Other conditions such as stroke/transient ischemic attack, depression, Alzheimer's and acute myocardial infarction impact about 1 percent of Molina's membership. Less than 1 percent of members have been diagnosed with breast cancer or colorectal cancer. While 43 percent of members are aged 65 or older, only 27 percent of the behavioral health diagnoses are attributed to that segment of the population. Conversely, the 57 percent of members who are under the age of 65 are responsible for 73 percent of the behavioral health diagnoses among the entire population.

Provider Network

Molina's network is designed to provide access to medical and behavioral care for the Molina D-SNP. The network's facilities include: acute care hospitals, long-term acute care facilities, skilled nursing facilities, rehabilitation facilities, urgent care facilities, emergency departments, outpatient surgery centers, inpatient/outpatient rehabilitation centers, inpatient/outpatient mental health/substance abuse facilities, outpatient surgery centers, laboratory facilities, radiology imaging centers, renal dialysis center, emergency departments, urgent care centers and diabetes education centers. In addition to primary care providers (PCP), medical specialists and ancillary providers, Molina's has an extensive network of mental health clinicians/providers.

Care Coordination and Management

Within 30 to 90 days of enrollment, Molina staff initiate an outreach call or home visit to the member and complete an initial health risk assessment (HRA). Based on the HRA results, the member may undergo secondary assessments using evidence-based tools which may include: in-person functional assessments of activities of daily living and instrumental activities of daily living, skin assessment, falls assessment, dementia screening, mental health screening, substance use screening, environmental safety assessment and disease management. Molina uses standardized screenings (SF-12 and PHQ-9) to screen for depression. Re-assessments occur annually, or more frequently depending on risk stratification, significant changes in the member's health status or a transition event.

The case manager (CM) works with the member and/or caregiver, the PCP and the interdisciplinary care team (ICT) to determine the individualized care plan (ICP). ICP content is based on assessments conducted with the member, a review of utilization history, discussions with the member, their caregiver and treating providers, member's goals, identification of barriers and clinical acuity. The ICP is updated annually, at a minimum, and at every member contact or in the event of a significant change in their health status. Elements of the ICP may include: member's care preferences/needs for service utilization, supplemental Medicare benefits, end-of-life care, social or community services and condition-specific education. It may also contain behavioral health components, including the results of the primary and secondary assessments and the disease/health management services needed for the behavioral health conditions.

The ICT is designed to address all aspects of a member's healthcare with input from the member and/or caregiver. The ICT is typically composed of the member's assigned PCP or primary specialty physician, Molina's integrated care management team (medical, behavioral health, and pharmacy clinicians), home and community based services staff as well as other ancillary providers as appropriate based on the members/enrollee's needs identified in the HRA.

This MOC summary is intended to provide a broad overview of the SNP's MOC. Although the full extent of any MOC cannot be conveyed in a short summary, this summary provides the reader with a general overview of how the SNP addresses beneficiary needs.
