3	N2001	N-15–N-18	<p>N2001: Drug Regimen Review</p> <p>Intent: The intent of the drug regimen review items is to document whether a drug regimen review was conducted upon the resident's admission (start of Skilled Nursing Facility [SNF] Prospective Payment System [PPS] stay) and throughout the resident's stay (through Part A PPS discharge) and whether any clinically significant medication issues identified were addressed in a timely manner.</p> <p>N2001. Drug Regimen Review - Complete only if A0310B = 01</p> <p>Enter Code <input type="checkbox"/></p> <p>Did a complete drug regimen review identify potential clinically significant medication issues?</p> <p>0. No - No issues found during review</p> <p>1. Yes - Issues found during review</p> <p>9. NA - Resident is not taking any medications</p>

			<p>Item Rationale</p> <p>Health-related Quality of Life</p> <ul style="list-style-type: none"> Potential and actual resident medication adverse consequences and errors are prevalent in health care settings and often occur during transitions in care. Adverse consequences related to medications may result in serious harm or death, emergency department visits, and rehospitalizations and affect the resident's health, safety, and quality of life. Drug regimen review is intended to improve resident safety by identifying and addressing potential and actual clinically significant medication issues at the time of a resident's admission (start of SNF PPS stay) and throughout the resident's stay (through Part A PPS discharge). <p>DEFINITIONS</p> <p>DRUG REGIMEN REVIEW</p> <p>A drug regimen review includes medication reconciliation, a review of all medications a resident is currently using, and a review of the drug regimen to identify, and if possible, prevent potential clinically significant medication adverse consequences.</p> <p>The drug regimen review includes all medications, prescribed and over the counter (OTC), nutritional supplements, vitamins, and homeopathic and herbal products, administered by any route. It also includes total parenteral nutrition (TPN) and oxygen.</p> <p>Planning for Care</p> <ul style="list-style-type: none"> Drug regimen review is an important component of the overall management and monitoring of a resident's medication regimen. Prevention and timely identification of potential and actual medication-related adverse consequences reduces the resident's risk for harm and improves quality of life. Educate staff in proper medication administration techniques and adverse effects of medications, as well as to be observant for these adverse effects.

			<p>mechanical mitral heart valve and was to continue receiving anticoagulant medication. While completing a review and comparison of Mr. H’s discharge records from the hospital with the physician’s admission medication orders and admission note, the nurse noted that the admitting physician had ordered Mr. H’s anticoagulation medication to be held if the international normalized ratio (INR) was below 1.0, however, the physician’s admission note indicated that the desired therapeutic INR parameters for Mr. H was 2.5–3.5. The nurse questioned the INR level listed on the admitting physician’s order, based on the therapeutic parameters of 2.5–3.5 documented in the physician’s admission note, which prompted the nurse to call the physician immediately to address the issue.</p> <p>Coding: N2001 would be coded 1, Yes—Issues found during review.</p> <p>Rationale: The admitting nurse reviewed and compared Mr. H’s discharge health care records from the acute care hospital with the nursing facility physician’s admission medication orders and admission note. The nurse identified a discrepancy between the physician’s documented therapeutic INR level (2.5–3.5) for Mr. H in the admission note and the physician’s order to hold anticoagulation medication for an INR level of 1.0. The nurse considered this discrepancy to be a potential clinically significant medication issue that could lead to potential clotting issues for Mr. H.</p>

			<ul style="list-style-type: none"> • A dash (–) value is a valid response for this item; however, CMS expects dash use to be a rare occurrence. <p>Examples</p> <p>1. Mr. P was admitted to the nursing facility with active diagnoses of pneumonia and atrial fibrillation. The acute care facility medication record indicated that Mr. P was on a seven-day course of antibiotics and had three remaining days of this treatment plan. The nurse reviewing the discharge records from the acute care facility and the nursing facility admission medication orders noted that Mr. P had an order for an anticoagulant medication that required INR monitoring, as well as the antibiotic. On the date of admission, the nurse contacted the physician responsible for Mr. P and communicated a concern about a potential increase in Mr. P's INR with this combination of medications that could place him at greater risk for bleeding. The physician provided orders for laboratory testing so that Mr. P's INR levels would be monitored over the next three days, starting that day. However, the nurse did not request the first INR laboratory test until after midnight of the next calendar day.</p> <p>Coding: N2003 would be coded 0, No.</p> <p>Rationale: A potential clinically significant medication issue was identified during the drug regimen review; the staff did contact the physician before midnight of the next calendar day, but did not complete, to the extent possible, the physician-prescribed actions related to the INR laboratory test until after midnight of the next calendar day.</p> <p>2. Ms. S was admitted to the facility from an acute care hospital. During the admitting nurse's review of Ms. S's hospital discharge records, it was noted that Ms. S had been prescribed metformin. However, laboratory tests at admission indicated that Ms. S had a serum creatinine of 2.4, consistent with renal insufficiency. The admitting nurse contacted the physician to ask whether this medication would be contraindicated with Ms. S's current serum creatinine level. Three hours after Ms. S's admission to the facility, the physician provided orders to discontinue the metformin and start Ms. S on a short-acting sulfonylurea for ongoing diabetes management. These medication changes were implemented within the hour.</p> <p>Coding: N2003 would be coded 1, Yes.</p>
